100% BEAN-TO-BAR: Zotter chocolates are produced starting from the bean in our bean-to-bar chocolate factory.

The independent NGO "Südwind" has closely examined all the WFTO's current ecology, transparency and social effectiveness credentials and has designated it exemplary in terms of credibility and social issues. THE PROTECTION OF THE ENVIRONMENT

is a very important aspect of our corporate philosophy.

Our environmental protection and our environmental measures are ISO 14001 and EMAS certified. EMAS-certified companies are recorded in a Europe-wide register and are regularly checked and monitored on a national level by environmental experts approved by the environment department.

You can find our environmental declaration in German online at www.zotter.at/umwelt

BIOGENIC PACKAGING & BIOPLASTICS

Around 90% of our packaging is biogenic and made from renewable raw materials.

We use certified paper from sustainable sources and environmentally friendly colours for all our packaging. For the most part, we use bioplastics, which consists of renewable raw materials, is biodegradable and even compostable, compliant with the EN 13432 standard.

DESIGN

Andreas H. Gratze (A-H-G), Zotter's art director has created our beautiful designs with pen and tons of humour since 1994. www.a-h-g.at

ORGANIC SOY LECITHIN

We use soy lecithin from controlled organic cultivation in white and milk chocolates. Soy lecithin is guaranteed non-GMO and environmentally friendly, as no part of the rain forest is destroyed for its cultivation. Our dark chocolate does not contain soy lecithin.

STORAGE ADVICE

We do not use any artificial stabilizers or preservatives. For this reason, our goods are more temperature sensitive than other high-quality chocolate products.

Ideally you should store Zotter chocolates in a cool and dry place where the temperature is between 16 °C and 18 °C.

You should not put the chocolates into a fridge. This way they would lose their substance because the humidity would let the sugar crystallise. If the temperature is too high, though, it will result in the emission of cocoa butter which will settle as a white film on the surface of the chocolate. The loss of the cocoa butter will dry out the chocolate – hence, the flavour of the chocolate will suffer.
